## BLACK BOX

Take back  
control

**WORLD  
FIRST**

### “Mechanical suspension tuning is no longer enough”

Modern vehicles are equipped with a stability control system. These systems are called different names, like ESP, ESC, VDC and so on, but they all operate under similar principles. They're typically part of the ABS system and are closely linked. These systems look for any perceived deviation from a cars' "ideal" path like oversteer or understeer and then use selective braking of individual wheels to take control. Great idea and a good safety feature but too intrusive for racing or track work.

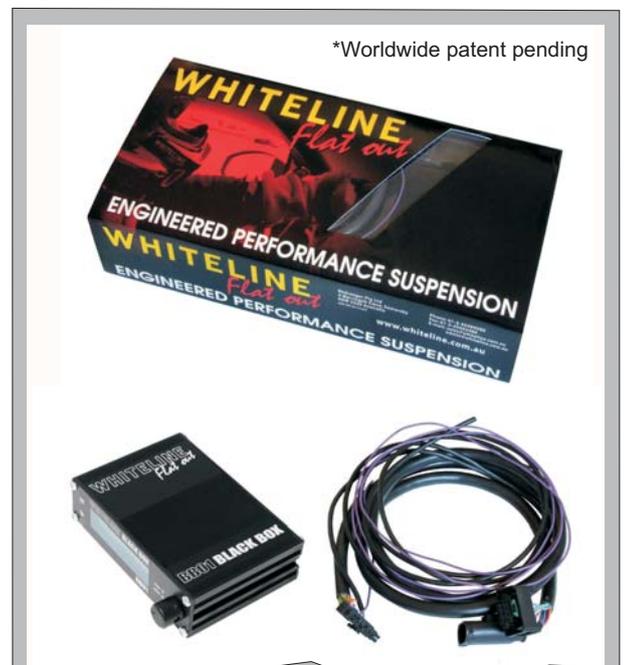

Whiteline's **BLACK BOX** is a world first allowing the driver to electronically tune the stock stability control system to give control back to the driver. The patented **BLACK BOX** system is unique in allowing cockpit adjustable handling bias, a single dial delivers more oversteer or understeer on demand. Only Whiteline's **BLACK BOX** lets you tune the amount of intervention and even turn off stability control, without error codes or warning lights.

**BLACK BOX** is designed for Race or Off-Road use but its still supplied in kit form specially programmed for each vehicle. Comprehensive installation and tuning instructions are provided but some modification of wiring is necessary and we recommend fitment by a qualified workshop.

Current applications available (more on the way like MY08 STi )

- KBB0101** GM/Opel Astra Mk4 TS 99-04
- KBB0102** GMH Commdore VZ (with ESP)
- KBB0103** GMH Commdore VE
- KBB0104** Nissan 350Z (Track with VDC)

Contact Whiteline to learn more about the technology or ask for a copy of the HBM Technical Paper. More details also available on YouTube, search *Whiteline HBM* or **BLACK BOX** to see more.
