## Commodore Adjustable Radius Rods

Max adjustment  
less 0.6 deg

Max adjustment

The **KRR207** and **KRR207X** are the newly designed caster correction radius rods to suit all Commodores from VB to VS and are **NOW IN STOCK!**

Fitment of the rods will add between 0.5 to 2.0 degrees of positive caster at the wheel. Extra caster will dramatically improve steering response, stability and cornering through increased dynamic negative camber.

Two different models are available. **KRR207** is sold as a single rod that will add up to 2.0 deg positive castor to existing settings using shim adjustment. For outright performance, choose kit number **KRR207X**. Sold as a packaged kit comprising 2 complete rods and low compliance poly bush sets plus all necessary installation hardware.

These rods are now made in Australia from quality spring steel and are powder coated for durability. The bushes are specially designed to suit the rods and are made from engineering grade polyurethane. Fitting instructions included.
