## challenger charger & 300C

### Adjustable stabilizer bars

FRONT - 32mm

REAR - 18mm

#### NOW AVAILABLE

#### Adjustable sway bars for the Dodge Challenger/ Charger

The front sway bar (BCF12Z) features a solid 32mm adjustable set up designed to balance out inherent oversteer tendencies, whilst the rear sway bar (BCR15Z) boasts 18mm in diameter. Both offer 2 points of adjustment allowing their stiffness to be altered by increasing or reducing the length of the lever arms

A sway bars objective is to reduce sway, or body roll, and stabilise a vehicle under lateral (cornering) forces. Having adjustability permits the roll stiffness to be tuned for different situations without replacing the entire bar. The stiffer the bar, the more force required to move the left and right wheels relative to each other. This increases the amount of force required to make the body roll.

Cornering loads are spread more evenly across the tyres delivering more grip and frankly, that's what it's all about. You also get improved tyre wear as your tyres stay flatter and more upright. Comfort improves because your car sits flatter through bends meaning less movement inside the vehicle.

Whiteline Swaybars are part of the Whiteline handling system. Designed to match and integrate with Chassis Bracing and key alignment products to deliver a fully balanced handling solution.

Polyurethane bushings are also included with lateral locks finishing off the kit to prevent walking of the sway bar.

So without reducing comfort, a Whiteline Swaybar will make your suspension system and tyres perform better, making the car more responsive while delivering more grip.

### DODGE CHALLENGER, DODGE CHARGER CHRYSLER 300C

**BCF12Z** Front 32mm 2 point adjustable sway bar

**BCR15Z** Rear 18mm 2 point adjustable sway bar
