

WHITELINE ACHIEVES TUV CERTIFICATION ON KEY AUDI, VW, OPEL & FORD PRODUCTS

As a marketing effort to further penetrate the European enthusiast market Whiteline has sought and achieved TUV certification on a number of key handling products. Specifically targeting European makes such as the Volkswagen Golf, Audi A3, Opel Astra, Seat Leon, Skoda Toledo and Ford Focus, Whiteline products have endured vigorous testing both on and off the vehicle to ensure they meet the high quality and safety standards for German vehicles and roads.

Andy Nolan marketing manager for Whiteline claims “the whole TUV process has been extremely beneficial from a quality standards aspect. To adhere to the strict standards ensures we are producing and going to market with a superior product. We have had many opportunities for Whiteline products from the European market but they have always fallen by the way side due to the need for TUV certification, so not only shall we boost sales in Europe but the recognition from other markets of the TUV quality will also be a positive”

For those new to Whiteline, the brand graces a number performance suspension components that work hard to deliver real results and performance outcomes for vehicles and motorists the world over. Whiteline's primary focus was initially delivering 'bang for your buck' handling gains from the simplicity of an anti sway bar. But over the years, the expertise, the knowledge, the reputation and the products have grown since progressed to include additional offerings such as the range of infamous anti lift/caster kits, roll centre adjuster kits, adjustable control arms, camber kits, polyurethane bushing kits, strut and chassis bracing.
