WARNING: Whiteline Products are designed to for easy installation but professional installation by a Whiteline Performance Center is recommended. Please drive carefully and accustom yourself to the improved handling characteristics of the vehicle.

- Lift the vehicle and support the vehicle chassis (not rear axle).
- Using a flat blade screwdriver, remove the Panhard Rod cover from the driver side end by sticking the screwdriver through the access hole and releasing the retainer clips.
- Remove the passenger side Panhard bolt. (OPTIONAL: Pull the bar down and slightly flex the bar towards the rear of the car to help create space on the driver-side mount which may be caused by previous over-tightening.) Remove driver side bolt and remove Panhard rod from vehicle.
- The Whiteline Panhard Bar has been preset for factory length. Insert one end into the driver side mount tighten thread by hand.
- Insert the other end into the passenger side bracket and thread the bolt in by hand.
- Torque both bolts to 129ft lbs.
- If no adjustment is needed, loosen jam nuts and apply thread lock, retighten and lower car to the ground.

ADJUSTING AXLE CENTER

- Cycle suspension of vehicle, driving in and out of a driveway should suffice.
- Using a plumb line hanging from the rear fender, measure the distance from the fender to the wheel rim on both sides of the car and record the measurements.
- Subtract the larger number from the smaller number to get the offset distance.
- Divide the offset by two, to split the difference.
- Loosen the jam nuts on both ends of the turnbuckle and adjust the length previously determined.
- Apply thread lock and tighten jam nuts.

Note: Recheck all fastener torque after the initial 100 miles of driving.
