Whitelines new improved h/duty swaybar mounts

These heavy duty rear sway bar mounting bracket kits are designed to replace the original equipment mounts with a stronger more rigid version. Extra heavy duty rear sway bar mounts improve sway bar response and should be used for large diameter or adjustable sway bars. Critical when using higher settings as factory mounts will twist and flex and can fail prematurely.

The **KBR20-(size)** series is designed for use on Subaru Impreza and WRX models and covers a range of sway bar sizes. Available in 19,20,22 and 24 mm size. **KBR30-(size)** series is designed for Forester and includes an extra alloy spacer block. Available in 18, 20 and 22 mm version.

Refer application catalogue for more detailed fitment information.

Newly improved design featuring:

- fitment arrow (points to front)
- improved exhaust clearance
- metallic silver powder coat finish

*Order the new mounts on their own to upgrade your old kit. Part number **KBR20B** supplied with new mounts and mounting hardware.

Right hand side looking out from centre towards front. Arrow points toward front of vehicle to simplify fitting. Note new cut-out for extra clearance for larger mufflers. (when used on left hand side)
