Flat out

Price review 1st July 2005

Unfortunately we have had to review our costs and address the increases incurred over the previous year. These generally relate to above CPI increases in the costs of raw material, energy and specialised labour. China continues to grow at a very fast rate and with that it also continues to place a great strain on global demand for raw materials including steel and oil. This has led to further increases in steel and aluminium pricing along with higher prices for any petroleum based products like gas, plastics and polyurethane.

As much as the Australian economy may be enjoying a record low unemployment rate, the reverse side to this is a decrease in the availability of skilled labour. This has increased the cost of labour and along with material cost increases discussed, off-setting many potential efficiency gains and savings. Being a largely Australian based manufacturer we have little insulation from these factors.

Overall the increase is around 3 - 3.5% with some variations depending on product group and circumstances. We have tried to factor in future efficiency gains where possible and look forward to being able to pass on the benefits in the future.

We will be posting you a new price list around the end of June but can provide an electronic copy around the middle of June, just let us know.

New product applications summary

Please add the following to your application guides. More details available in the application catalogues and on the website
