Suggested wheel alignment specs				Camber Deg	Caster(6) Deg	Toe mm/side
Optimum starting setting designed for use with Whiteline kit.						
Front	Touring			-1.5	L7.0 / R6.5	0.0
	Sport			-2.00	L7.0 / R6.5	0.0
Rear	Touring			-1.0 (7)	n/a	1mm in
	Sport			-1.5 (7)	n/a	0.5mm in

(1)-Height indicates measurement in mm from centre of wheel to guard, +/- 1.5%. Superlow applications with extra rear load can use standard low rear. These heights only available when using Whiteline specified shock absorbers.

(2)-Retail in A\$ includes GST, excl. freight. Special net price for package part number.

(3)-Handling and Works fitting prices include wheel alignment. Fitting and labour prices are meant as suggestions and are only available when purchasing parts kit from same dealer.

(4)-Options: These items not included in package but available as separate item.

(5)-Shocks are a monotube gas unit with integral spring platforms and sport valving. Whiteline Premium adjustable coil-overs feature externally adjustable ride height and shock rate using 40mm mono-tube high pressure gas shock and progressive springs. Suitable for road and race.

(6)-KCA331 provides extra +/- 0.75 static castor.

(7)-Rear camber factory adjustment is particularly inadequate for lowered cars. KCA347 replaces upper inner control and radius arm bushes using offset tube to deliver +/-0.75 deg change. Use 2 x KCA347 kits for both inner and outer for +/- 1.5 deg change. Supplied with 8 bush halves and 4 tubes per kit. Rear settings only available using this kit.

(8)-Disconnecting rear Super HICAS active steer system can produce positive results for race track use, however extreme care should be taken when modifying. Aftermarket HICAS bypass kits are also available. Contact Whiteline for more details.
