height & rate
adjustable coil-over
shock absorbers.**

**The new standard for
tuned performance
suspension**

\$3395 from*

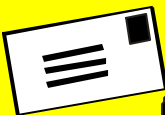

The heart of a good suspension package is the shock or damper. The best springs in and swaybars in the world will not perform with poor dampers however a set of high quality shocks can mask a lot of other suspension problems. For this reason we take shocks very seriously. So much so that we've commissioned one of Australia's leading motorsport shock manufacturers to make us a special range using our rates and specifications.

The Whiteline Premium range is the result of Whiteline's search for the best possible road shock absorber solution. With a broad range of coil-over kits combining ride height and shock rate adjustment, we can deliver the best possible handling result. This includes Commodore, WRX, Nissan S13/14/15 and most performance 4's. Range is being expanded constantly.

Utilising a 40mm diameter high pressure mono-tube gas shock, the premium range can handle very high spring rates, greater than most "off-the-shelf" alternatives. They use a combination 30 step external bump/rebound adjuster for tuning between race and road. Each kit comes with an adjusting tool, instructions & individual dyno test sheet. Premium equals the best.

*Manufacturers rec retail in A\$ excluding freight including GST.
